THE WEEK AHEAD

July 23-27, 2018

Breaking the Omerta

by Avery Shenfeld

Donald Trump didn't really break a written code of Omerta when he voiced his displeasure with the Federal Reserve Board. While his recent predecessors maintained their silence on monetary policy matters, both Nixon and Reagan leaned on the Fed during their time in office, while George H.W. Bush griped after his term.

Trump's helpful suggestions on monetary policy aren't likely to be given a hearing at the next FOMC meeting. The last time a central bank seemed to have succumbed to pressure for easier monetary policy, we were left with the sharp inflation climb of the Nixon era, hardly a comforting precedent.

The President has complained that Fed hikes, coupled with easy monetary policy elsewhere, is lifting the US dollar. That in turn will serve to blunt some of the positive growth impacts of tax cuts, and perhaps even negate a bit of the protectionist wall of tariffs.

But if he's looking for reasons for a US dollar rally, he should also be looking in the mirror. Markets that worry about trade war damage to Europe, Canada, or Mexico will be tempted to sell those currencies, expecting their trade balances to deteriorate, or their central banks to take a softer line on monetary policy. The tax cut bill would have on its own elevated the greenback's exchange rate, by drawing in capital seeking to invest under the stimulus of lower corporate rates. And anytime fiscal stimulus is enacted in an economy already nearing full employment, it will bring forward the timing of the monetary tightening needed to prevent an overheating.

But Trump does have a point for foreign exchange market players. These forces have pushed the USD beyond where trade fundamentals would justify. That's dangerous for those sitting long the greenback against overseas majors, or for Canadian firms that have future needs to buy euros or yen. As we get deeper into the Fed hiking cycle, and past the peak impacts of fiscal stimulus, markets will start looking ahead to the dollar giving back some of these outsized gains.

Since the Fed won't be done in 2018, and fiscal stimulus is ongoing, a larger US dollar retreat might be next year's story, as investors start to anticipate an interest rate plateau.

But the first step towards a modest reversal in dollar gains could come on the trade war front. Europe and Japan have agreed on a free trade pact. Could that allow the EU to lower its most-favoured-nation tariffs on vehicles more broadly in exchange for the US dropping its threat to European exports? Could China come to see an escalating battle with the US as enough of a worry to get down to real negotiations with the White House? Both seem plausible enough to warrant lightening up on bets for further USD gains against overseas currencies.

As for the Canadian dollar, it's not clear that the USD is yet overvalued against the loonie on trade fundamentals. Unlike Europe, Japan or China, Canada isn't running an overall trade surplus with the US, and is running a large deficit with the rest of the world. Outside the energy sector, it hasn't been competitive enough to attract much in the way of new capacity expansions. That suggests that the Canadian dollar could be range-bound even if the US dollar loses its shine against others.

Week Ahead's Market Call

by Royce Mendes

In the US, we'll get the first estimate of second quarter GDP. There's a lot of anticipation among investors for an above-4% print, so a downside miss versus our 4.1% call could knock sentiment lower. Further evidence of tax cut stimulus should be seen in next week's solid reading on durable goods orders, and presage a strong contribution to GDP growth from investment in the third quarter. Markets increasingly focussed on trade will also take notice of EC President Juncker's meeting with US President Trump.

In Canada, it's a light week on the data calendar. Wholesale trade is the final piece of the monthly GDP puzzle, but with the other inputs already pointing toward a healthy advance, there's unlikely to be much market reaction to a 0.6% gain in sales. Given the absence of other economic data, the wage print in the payroll survey could garner more attention than usual. But markets will also be digesting continued equity earnings releases, both north and south of the border.

There are no Key Canadian Numbers this week.

Week Ahead's Key US Number:**Real GDP—Q2 (Advance)**

(Friday, 8:30 a.m.)

Katherine Judge (416) 956-6527

	CIBC	Mkt	Prior
GDP q/q annualized	4.1%	4.2%	2.0%
GDP Deflator	2.4%	2.4%	2.2%

Consumption rebounded in Q2 but it will be exports and investment leading the way. Economic activity likely expanded by 4.1% in Q2, the strongest pace since 2014 and over double the rate of expansion seen in the previous quarter.

Business investment was robust, as indicated by a pickup in capital goods imports. The brisk pace was likely helped by the accelerated depreciation of equipment provision under tax reform. Exports have also picked up steam this quarter and net trade should add strongly to growth. But that may have been the result of a pulling forward of foreign demand ahead of tariffs.

Forecast Implications—A stellar Q2 performance will be followed by a return to more normal growth rates over the rest of the year. Early indications suggest that business investment will continue to benefit from tax reform, but export growth is likely to slow.

Market Impact—We are slightly below the consensus forecast but likely not by enough to see a sustained move in markets.

Other U.S. Releases:**Durable Goods Orders—June**

(Thursday, 8:30 a.m.)

June was a brisk month for aircraft orders after two months of contractions that held down the headline number, and that should support a lofty 3.2% advance in durable goods orders. Tax reform is encouraging stronger investment, and should support a 0.6% advance in the ex-transportation figure, a solid bounceback from the last month and a continuation of the healthy trend that began over a year ago.

Advance Goods Trade Balance—June

(Thursday, 8:30 a.m.)

Import prices were down on the month while export prices rose, but a surge in US oil and petroleum product imports as reported by industry sources could underpin a widening in the goods trade balance to -\$66.7 bn. The trade balance has narrowed this quarter but that could have been supported by a pulling forward of exports related to tariffs.

Equity Insights

Katherine Judge and Andrew Grantham

US Homebuilding Prospects Favour Single-Family Market

US single-family homebuilding has continued on a gradual upward trajectory despite a hiccup in June. Indeed, the implementation of lumber tariffs in April 2017 did little to stall demand for single-family homes, as reflected in the rise in the home ownership rate. The same cannot be said about multi-family housing starts, however, which have struggled to make progress since 2017. The newly implemented tariffs on steel won't help that trend, as multi-family building has already dropped off since their announcement in March meaning that builders may not have yet felt the effects. Multi-family permits have also plateaued, suggesting homebuilding stocks that are more exposed to single-family homes may fare better going forward.

Lumber Has Seen More Significant Price Gains (L), But Lumber-Intensive Homebuilding Has Held Up (R)

Source: Bloomberg, Statistics Canada, US Census Bureau, CIBC

US Industrials to Shake off Tariff Rhetoric

Despite strong domestic demand, US industrial stocks have suffered this year, a divergence from Canada where constructive readings on shipments recently have helped industrial shares appreciate even amidst the threat of auto tariffs. While the Trump administration continues to mull further trade barriers, fundamentals suggest that there could be a reversal of fortunes on the horizon for industrials. The inventory-to-sales ratio has been on the rise in Canada since mid-2017, in contrast to its southern counterpart. And when combined with capacity constraints facing Canadian factories, that could make US industrials more attractive going forward.

US and Canada Industrial Stocks Have Diverged (L), But Fundamentals Suggest a Reversal is in Store (R)

Source: Bloomberg, US Census Bureau, CIBC

Consumers: Where Could Belts be Tightened?

A creeping trade war and higher gasoline prices will put at least some pressure on consumers' spending power in the months to come. However, any cut backs won't necessarily come where prices are rising. In the US, more extra spending power recently has gone towards increased spending on discretionary services rather than goods. Even though goods prices will be rising, many will be on non-discretionary items. As such, it could be services, including restaurants, which have seen sales strengthen in the past year, that could be adversely affected. In contrast, the gap between discretionary goods and services spending in Canada isn't currently as pronounced and so doesn't point to an obvious area where consumers could tighten their belts.

Spending Gap in the US Suggests Sales of Discretionary Services Could Come Down

Currency Currents

Andrew Grantham

Beware a Return of Volatility

Financial markets appear to be a little too calm amid a growing trade storm. That's true in FX markets as well. While implied volatility has picked up for the CNY recently, as the currency has weakened amid tariff talk, three-month implied volatility for USDCAD is actually below its average since President Trump took over at the Oval Office. Even if it's still likely that protectionism fades, given great uncertainty still regarding tariffs and NAFTA, it could be a good time to take out some protection against future volatility.

Implied Volatility in USDCAD Below Recent Average Despite Risks

Source: Bloomberg, CIBC

Policy Convergence Trade Not Making a Quick Return

The policy convergence trade of 2017, taking EURUSD higher, has gone into reverse and it could be a while before it resumes. Latest readings for core inflation in the US (seeing it move higher) and Eurozone (lower) have seen the differential between those inflation gauges return to near extreme levels. As the Fed continues hiking, the differential between its main rate and the ECB's will also get close to historical extremes towards the end of this year. It may not be until 2019, when we get closer to ECB hikes, that we see a meaningful re-appreciation of the single currency.

Difference Between US-EZ Interest Rates and Core CPI Both Nearing Historical Extremes

Source: Bloomberg, BLS, Eurostat, CIBC

Canadian GDP: On Unstable Footing?

The BoC has just hiked interest rates and GDP growth looks set to have accelerated to around 2½% in Q2. Yet we don't think rates will be going up again in a hurry. Why? Well there's obviously the uncertainty surrounding trade with the possibility of auto tariffs hanging overhead. However, there's also the fact that the recent acceleration in growth looks a little fragile. The proportion of industries seeing growth on a quarterly basis remains pretty low, with much of the recent growth driven by oil & gas. And while manufacturing is strong at the moment, a high inventory-shipment ratio could suggest a deceleration ahead. So we expect growth to slow again in Q3, leaving the BoC able to continue a very gradual approach to rate hikes and seeing the C\$ weaken slightly further to September.

Growth Appears to be Picking Up (L), But the Acceleration is Narrowly Based (R)

All data seasonally adjusted except where noted "NSA". M: per cent change from previous month. Q: per cent change from previous quarter at annual rates. Y: per cent change from year earlier. AR: Annual Rate. YTD: Year to date. Release dates are provided by sources outside CIBC World Markets inc. Dates are subject to change. Sources for historical data: U.S. Department of Commerce, U.S. Department of Labor and U.S. Federal Reserve Board.

CIBC World Markets Inc., CIBC World Markets Corp., CIBC World Markets Plc., CIBC Australia Limited and certain other corporate banking and capital markets activities of Canadian Imperial Bank of Commerce operate under the brand name CIBC Capital Markets.

This report is issued and approved for distribution by (a) in Canada, CIBC World Markets Inc., a member of the Investment Industry Regulatory Organization of Canada, the Toronto Stock Exchange, the TSX Venture Exchange and a Member of the Canadian Investor Protection Fund, (b) in the United Kingdom, CIBC World Markets plc, which is regulated by the Financial Services Authority, and (c) in Australia, CIBC Australia Limited, a member of the Australian Stock Exchange and regulated by the ASIC (collectively, "CIBC") and (d) in the United States either by (i) CIBC World Markets Inc. for distribution only to U.S. Major Institutional Investors ("MI") (as such term is defined in SEC Rule 15a-6) or (ii) CIBC World Markets Corp., a member of the Financial Industry Regulatory Authority. U.S. MIs receiving this report from CIBC World Markets Inc. (the Canadian broker-dealer) are required to effect transactions (other than negotiating their terms) in securities discussed in the report through CIBC World Markets Corp. (the U.S. broker-dealer).

This report is provided, for informational purposes only, to institutional investor and retail clients of CIBC World Markets Inc. in Canada, and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction where such offer or solicitation would be prohibited. This document and any of the products and information contained herein are not intended for the use of private investors in the United Kingdom. Such investors will not be able to enter into agreements or purchase products mentioned herein from CIBC World Markets plc. The comments and views expressed in this document are meant for the general interests of wholesale clients of CIBC Australia Limited.

This report does not take into account the investment objectives, financial situation or specific needs of any particular client of CIBC. Before making an investment decision on the basis of any information contained in this report, the recipient should consider whether such information is appropriate given the recipient's particular investment needs, objectives and financial circumstances. CIBC suggests that, prior to acting on any information contained herein, you contact one of our client advisers in your jurisdiction to discuss your particular circumstances. Since the levels and bases of taxation can change, any reference in this report to the impact of taxation should not be construed as offering tax advice; as with any transaction having potential tax implications, clients should consult with their own tax advisors. Past performance is not a guarantee of future results.

The information and any statistical data contained herein were obtained from sources that we believe to be reliable, but we do not represent that they are accurate or complete, and they should not be relied upon as such. All estimates and opinions expressed herein constitute judgments as of the date of this report and are subject to change without notice.

This report may provide addresses of, or contain hyperlinks to, Internet web sites. CIBC has not reviewed the linked Internet web site of any third party and takes no responsibility for the contents thereof. Each such address or hyperlink is provided solely for the recipient's convenience and information, and the content of linked third-party web sites is not in any way incorporated into this document. Recipients who choose to access such third-party web sites or follow such hyperlinks do so at their own risk.
